Install Guide

You can get the User Guide online at www.tendacn.com for featured settings of the device.

Package Contents

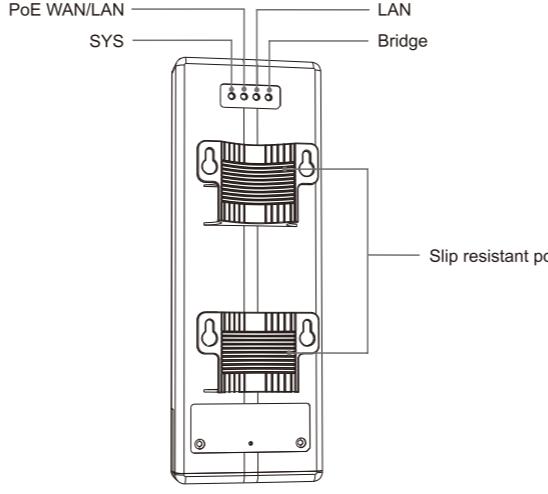

Long Range Outdoor Access Point *1	PoE Injector*1	Power Adapter*1
Screw*2 (for fixing the PoE Injector)	Plastic strap*2	Ethernet Cable*1
Screw Bolt*2 (for fixing the PoE Injector)	Grounding Screw*1	Install Guide*1
		GNU*1

Front View

Item	Port / Button	Description
①	GND	With the included grounding screw, attach a copper wire here to provide proper surge and lightning protection for your device.
②	RST	Pressing and holding the reset button for over 7 seconds restores this device to factory defaults.
③	LAN	A 100Mbps LAN port for connecting the Ethernet device such as a switch, a computer, etc.
④	PoE LAN/WAN	This port provides power over an Ethernet connection via the PoE injector. And it works interchangeably as a WAN port in Router mode and a LAN port in other modes.
⑤	/	Cable access hole cut-outs

Rear View

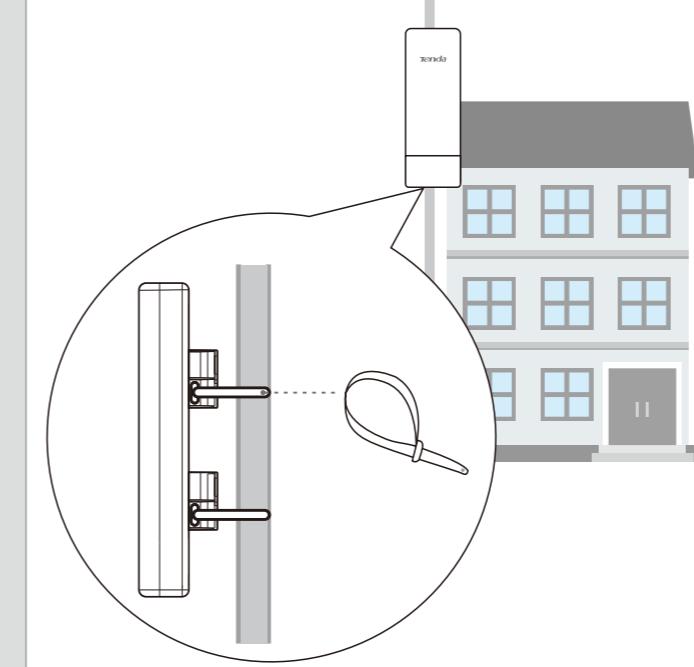

LED	Status	Description
SYS	Off	Malfunction occurs or the device is not powered on.
	Blinking	The device is working properly.
PoE WAN/LAN	Off	There is no device linked to this port.
	Solid	There is a device linked to this port but no data transmission.
	Blinking	Data transmission is occurring on this port.
LAN	Off	There is no device linked to this port.
	Solid	There is a device linked to this port but no data transmission.
	Blinking	Data transmission is occurring on this port.
Bridge	Off	Working in AP or Router mode Failed to connect to remote AP
	Solid	Bridged to the remote AP successfully

1 Get to Know Your Device

► Front View

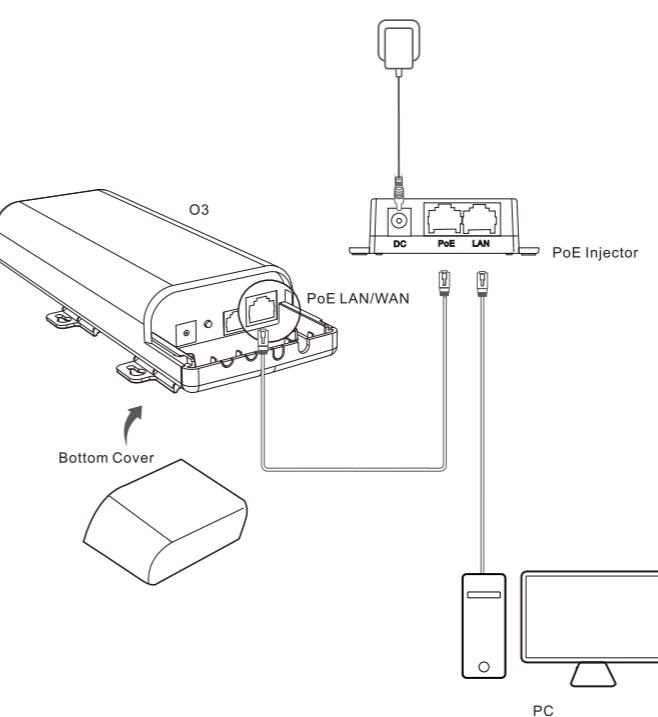

2 Hardware Install

Step 1: Mount the AP
 Set up the AP in an outdoor location, usually on the roof, and thread plastic wraps through grooves underneath the brackets. Then attach the device firmly to a solid pole.

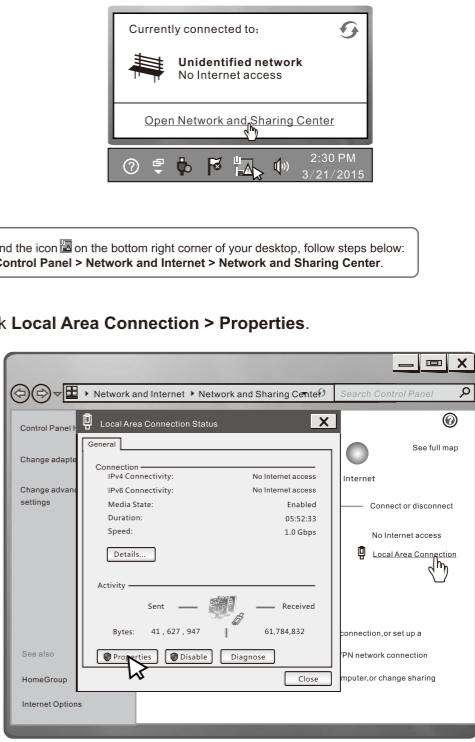

Step 2: Connect the AP

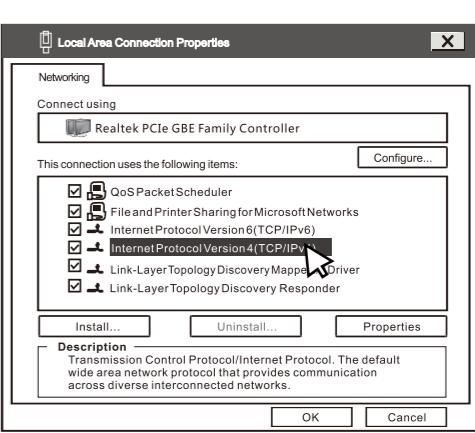

- Slide the bottom cover of the AP down to expose the ports.
- Connect the PoE LAN/WAN port of your AP to the PoE port of the injector with an Ethernet cable.
- Connect your computer to the LAN port of the injector with another Ethernet cable.
- Gently replace the cover by sliding it up until it clicks into place.
- Power on the AP by plugging the included power adapter into the DC jack on the injector, and the other end into a standard power outlet.

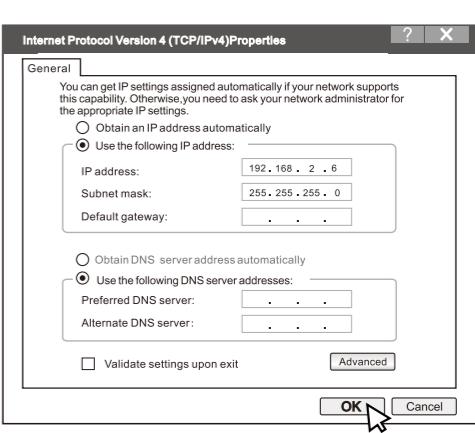

Step 3: Click Local Area Connection > Properties.

Step 4: Find and double click Internet Protocol Version 4(TCP/IPv4).

Step 5: Select Use the following IP address, type in the IP address: 192.168.2.x (2-253), Subnet mask: 255.255.255.0 and click OK.

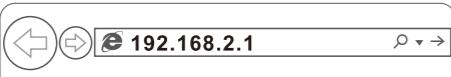

Step 6: Click OK on the Local Area Connection Properties window (see Step 4 for the screenshot).

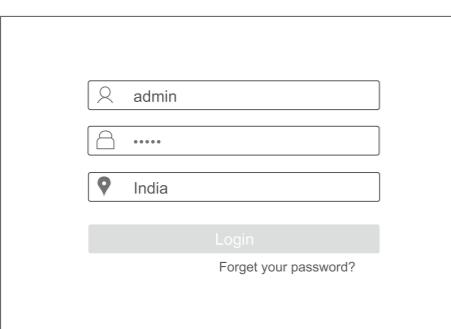

EAC

4 Configure the AP

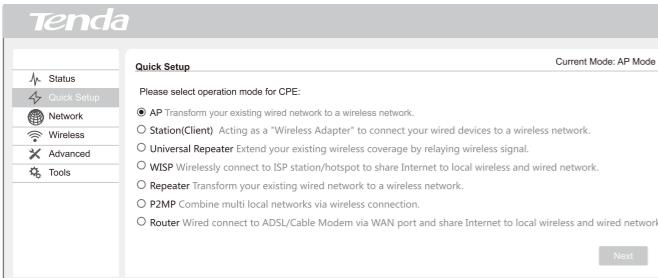

Step 1: Input 192.168.2.1 in a web browser's address bar, and then press Enter or Return on your keyboard.

Step 2: Enter the default username and password (admin for both defaults) and click Login.

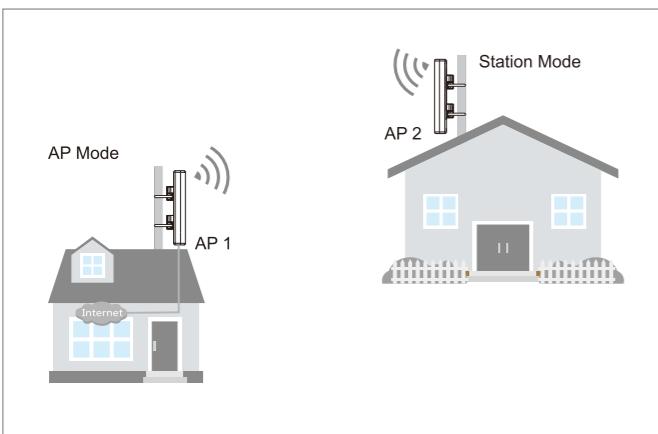

Step 3: Please select the proper operating mode and follow instructions on the web UI to apply your settings.

Here we will mainly introduce 2 application scenarios to you.

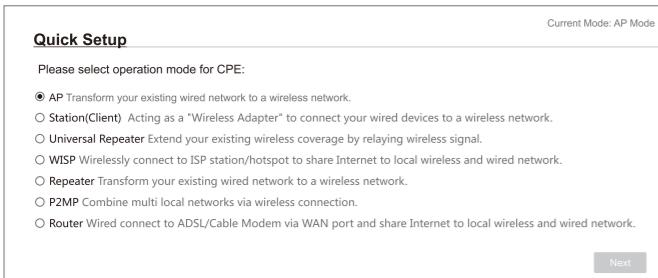

► AP Mode + Station Mode

For long-distance data transmission and IP camera (CCTV) surveillance, one works in AP mode and the other works in Station mode to build stable wireless connection. Please follow the steps as shown below.

1. Set AP1 in AP mode.

① Select AP mode

② Customize your SSID (WiFi name)
Set security settings (Recommended: WPA2-PSK, AES)

Quick Setup >> AP	
Current Mode: AP Mode	
This sector is used to set wireless network name and wireless password for your local network, please remember the wifi password.	
SSID	Tenda_001FA0
Channel	Channel 6(2437MHz)
Security Mode	WPA2-PSK
Encryption Type	<input checked="" type="radio"/> AES <input type="radio"/> TKIP <input type="radio"/> TKIP&AES
WiFi Password	12345678
Previous Next	

Then click Save on the appearing page to apply your settings. Wait until the device restarts automatically.

2. Set AP2 in Station mode.

① Select Station mode

Quick Setup	
Current Mode: AP Mode	
Please select operation mode for CPE:	
<input checked="" type="radio"/> AP Transform your existing wired network to a wireless network. <input type="radio"/> Station(Client) Acting as a "Wireless Adapter" to connect your wired devices to a wireless network. <input type="radio"/> Universal Repeater Extend your existing wireless coverage by relaying wireless signal. <input checked="" type="radio"/> WISP Wirelessly connect to ISP station/hotspot to share Internet to local wireless and wired network. <input type="radio"/> Repeater Transform your existing wired network to a wireless network. <input type="radio"/> P2MP Combine multi local networks via wireless connection. <input type="radio"/> Router Wired connect to ADSL/Cable Modem via WAN port and share Internet to local wireless and wired network.	
Next	

② Select the remote SSID (WiFi name) you wish to bridge from the list

Quick Setup >> Station					
Please switch on Scan button or click Rescan to scan the wireless signal, then select the remote AP you want to connect, and click Next to continue.					
Scan	Rescan				
Remote SSID Tenda_001FA0					
Select	SSID	Channel	MAC Address	Encryption	Signal Strength ▾
<input checked="" type="radio"/>	Tenda_001FA0	6	C8:3A:35:12:34:B0	wpa2psk/tkip+aes	
Next					

③ Enter the key (WiFi password) of the remote SSID if needed

Quick Setup >> Station					
Please keep Channel, Security mode,Encryption Type, Frequency bandwidth the same with remote AP, then enter the remote AP's wifi password, and click Next to continue.					
Remote AP	Tenda_001FA0	Remote AP MAC	C8:3A:35:12:34:B0	Channel	Channel 6(2437MHz)
Security Mode	WPA2-PSK	Encryption Type	<input checked="" type="radio"/> AES <input type="radio"/> TKIP <input type="radio"/> TKIP&AES	Previous Next	
Key 12345678					

④ If the remote AP's IP address is 192.168.2.1, this AP's IP address should be 192.168.2.x (2~254).

Quick Setup >> Station					
Please make sure the IP address is different from remote AP's IP address but in the same network segment.					
IP Address	192.168.2.3	Subnet Mask	255.255.255.0	Default Gateway	192.168.2.254
Preferred DNS Server	192.168.2.254	Alternate DNS Server		Previous Next	

Then click Save on the appearing page to apply your settings. Wait until the device restarts automatically. When the Bridge LED stays solid, it has been bridged successfully!

► WISP Mode

In this mode, the device connects to ISP hotspot wirelessly to share Internet with local wireless and wired devices.

① Select WISP mode

Quick Setup	
Current Mode: AP Mode	
Please select operation mode for CPE:	
<input type="radio"/> AP Transform your existing wired network to a wireless network. <input type="radio"/> Station(Client) Acting as a "Wireless Adapter" to connect your wired devices to a wireless network. <input type="radio"/> Universal Repeater Extend your existing wireless coverage by relaying wireless signal. <input checked="" type="radio"/> WISP Wirelessly connect to ISP station/hotspot to share Internet to local wireless and wired network. <input type="radio"/> Repeater Transform your existing wired network to a wireless network. <input type="radio"/> P2MP Combine multi local networks via wireless connection. <input type="radio"/> Router Wired connect to ADSL/Cable Modem via WAN port and share Internet to local wireless and wired network.	
Next	

② Select the SSID (WiFi name) of ISP hotspot

Quick Setup >> WISP					
Please switch on Scan button or click Rescan to scan the wireless signal, then select the remote AP you want to connect, and click Next to continue.					
Scan	Rescan				
Remote SSID Tenda_001FA0					
Select	SSID	Channel	MAC Address	Encryption	Signal Strength ▾
<input checked="" type="radio"/>	Tenda_001FA0	6	C8:3A:35:12:34:B0	wpa2psk/tkip+aes	
Next					

③ Enter the key (WiFi password) of the ISP hotspot if needed

Quick Setup >> WISP					
Please keep Channel, Security mode,Encryption Type, Frequency bandwidth the same with remote AP, then enter the remote AP's wifi password, and click Next to continue.					
Remote AP	Tenda_001FA0	Remote AP MAC	C8:3A:35:12:34:B0	Channel	Channel 6(2437MHz)
Security Mode	WPA2-PSK	Encryption Type	<input checked="" type="radio"/> AES <input type="radio"/> TKIP <input type="radio"/> TKIP&AES	Previous Next	
Key					

④ Select the WAN connection type and set corresponding parameters if needed

Quick Setup >> WISP					
Please select WAN connection type, then enter the PPPoE account or ip address provided by ISP, and click Next to continue.					
WAN Connection Type	<input checked="" type="radio"/> DHCP(Dynamic IP) <input type="radio"/> Static IP <input type="radio"/> PPPoE	Previous Next			

⑤ Customize your SSID for your local network Set security settings for your local network(Recommended: WPA2-PSK and AES)

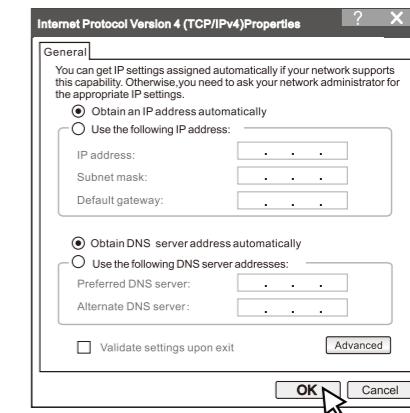

Quick Setup >> WISP					
This sector is used to set wireless network name and wireless password for your local network, please remember the wifi password.					
SSID	Tenda_001FA0	Channel	Channel 6(2437MHz)	Security Mode	WPA2-PSK
Encryption Type	<input checked="" type="radio"/> AES <input type="radio"/> TKIP <input type="radio"/> TKIP&AES	Previous Next			
WiFi Password 12345678					

⑥ If the ISP hotspot's IP address is 192.168.2.x, this AP's IP can be 192.168.5.x

Quick Setup >> WISP					
Please make sure the IP address is different from ISP hotspot's IP address and in the different network segment.					
IP Address	192.168.5.1	Subnet Mask	255.255.255.0	Previous Next	

Then click Save on the appearing page to apply your settings. Wait until the device restarts automatically. When the Bridge LED stays solid, it has been bridged successfully!

Step 4: After finishing settings mentioned above, set your PC to Obtain an IP address automatically for Internet access.

FAQs

Q1: How do I restore my AP to its factory default settings?

Method 1: Via the RST button
With the AP powered on, slide the bottom cover of the AP down to expose the RST button, press and hold it for over 7 seconds to restore the AP to its factory defaults. Note that once your AP is reset, all your current settings will be lost and you need to reconfigure your AP.

Method 2: Via the Web UI
Log in to this device's web UI, click Tools > Maintenance, locate the Reset to Factory Settings section and click Reset.

Q2: I enter the device's LAN IP address in the web browser but cannot access this device's web UI. What should I do?

Q2: Verify that the IP address of computer should be a different one but on the same network segment as the LAN IP address of this device. The default LAN IP address of AP is 192.168.2.1 and you need to set your PC to a static IP address within the following range: 192.168.2.X (2~253).

Q3: Clear the browser cookies or try another web browser;
If you are still unable to log in, please restore the device to factory default settings and follow this Install Guide to configure your settings again.

Safety & Emission Statement

CE Mark Warning

This is a Class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures. This device complies with EU 1999/5/EC.

NOTE: (1) The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. (2) To avoid unnecessary radiation interference, it is recommended to use a shielded RJ45 cable.

FCC Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Relocate or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment.

Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

NOTE: (1) The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. (2) To avoid unnecessary radiation interference, it is recommended to use a shielded RJ45 cable.
